

The following tasks of the Ground Coverage Display System Study can be initiated at once, to the extent indicated, without incurring the risk of extensive revisions as a result of the co-contractor's recommendations:

1. Task #1, Map Storage and Display Investigation 7.8 3.5

All aspects of the display and storage technology review, short of configuring subsystems, can be undertaken.

2. Task #3, Vectoring Methods 1.0 1.0

This total task can be accomplished.

3. Task #5, Geometric Projection and Error Analysis 1.5 .7

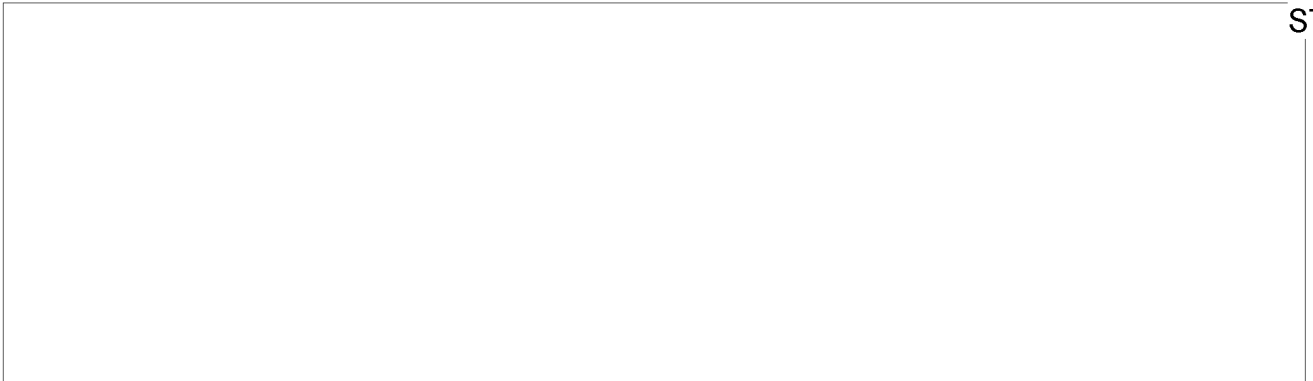

Sufficient work on this task can be accomplished to size the computational loads of a centrally or remotely located computer.

4. Task #7, Controller and Computational Analyses 2.7 1.5

Those items of the proposed task which are of a general analytical nature, and invariant with respect to specific data management requirements, can be studied immediately.

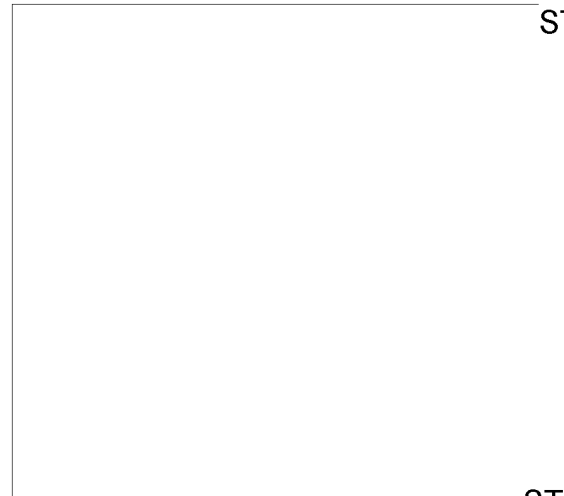

6/21/72

For discussion on June 22nd with Jim:

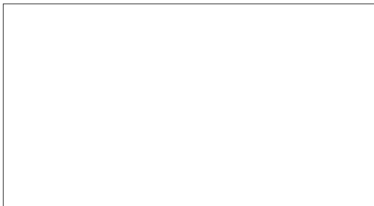

STAT

* On Temporary Pass, has been briefed, but paper work not previously submitted.
